

**CALGARY
ASSESSMENT REVIEW BOARD
DECISION WITH REASONS**

In the matter of the complaint against the property assessment as provided by the *Municipal Government Act*, Chapter M-26, Section 460, Revised Statutes of Alberta 2000 (the Act).

between:

Mayland Investments Inc. (as represented by Altus Group Limited), COMPLAINANT

and

The City Of Calgary, RESPONDENT

before:

K. D. Kelly, PRESIDING OFFICER

J. Massey, MEMBER

E. Bruton, MEMBER

This is a complaint to the Calgary Assessment Review Board in respect of a property assessment prepared by the Assessor of The City of Calgary and entered in the 2012 Assessment Roll as follows:

ROLL NUMBER: 070033006

LOCATION ADDRESS: 219 – 18 ST SE

HEARING NUMBER: 68271

ASSESSMENT: \$2,290,000

This complaint was heard on 12th day of October, 2012 at the office of the Assessment Review Board located at Floor Number 4, 1212 – 31 Avenue NE, Calgary, Alberta, Board 6.

Appeared on behalf of the Complainant:

- *Ms. C. Van Staden – Altus Group Limited*

Appeared on behalf of the Respondent:

- *Ms. – K. Cody - Assessor – City of Calgary*
- *Ms. – M. Hartmann – Assessor - City of Calgary*

REGARDING BREVITY:

[1] The Composite Assessment Review Board (CARB) reviewed all the evidence submitted by both parties. The extensive nature of the submissions dictated that in some instances certain evidence was found to be more relevant than others. The CARB will restrict its comments to the items it found to be most relevant.

Board's Decision in Respect of Procedural or Jurisdictional Matters:

[2] The following appeals were heard by the Board during the week of October 9 to 12, 2012 inclusive:

File No.	Decision No.	Roll No.	Address
68379	2063-2012-P	024008302	5225 – 8 ST NE

[3] **Common Issues:** All of the Board members named above attended all of the foregoing hearings throughout the week, and the Parties appearing before the Board during that time were represented by the same individuals noted above. Many of the issues, arguments, questions and responses were common throughout. At the request of the Parties and with the concurrence of the Board, those commonalities were carried forward from the hearing where they were first raised, to subsequent hearings without being restated in full in each hearing or in each written decision. The Parties selected file 68379 to be the “master” file upon which all common evidence and argument would be based and henceforth carried forward to subsequent files in turn.

[4] **S. 299. MGA:** In each of the complaints, the Complainant referenced information related to s. 299 of the Act. In each case – except one (file 66896) – the Complainant confirmed that there was no claim that the Respondent failed to produce the requested disclosures.

[5] Prior to the commencement of the hearing the Respondent advised the Board that in discussions with the Complainant, an error in the level of finish in the subject was discovered. The property was assessed with a finish of 100%. It should have been assessed at 48%. Consequently the Respondent recommended the assessment be corrected and reduced to \$2,250,000. The Complainant declined to accept this value and the hearing proceeded.

Property Description:

[6] Using the corrected data supplied by the Respondent, the subject is a two-building single-tenant (IWS) industrial warehouse on 1.30498 acres (Ac.) at 219 – 18 ST SE in the Mayland industrial area. It is zoned I-G in the City's Land Use Bylaw. The first building built in 1972 contains 15,544 square feet (SF) of assessable space; has 48% finish; and is assessed at \$130.13 per SF. The second building built in 1976 has 1,170 SF of assessable space; 0% finish; and is assessed at \$196.75 per SF. Both buildings taken together, cover a total of 29.40% of the site. The property was assessed using the Sales Comparison Approach to Value at \$2,290,000 at \$137.33 per SF - but when corrected, is revised to \$134.80 per SF for a corrected assessment of \$2,250,000. The site also received a multi-building discount.

Issue:

[7] What is the correct assessment for the subject when its 2012 assessed value is tested against selected valuation approaches and/or techniques?

Complainant's Requested Value:

[8] The Complainant requested the assessment be reduced to \$1,310,000 based on the Income Approach to Value.

Board's Decision in Respect of Each Matter or Issue:

1. Sales Comparison Approach:

[9] The Complainant provided five sales comparables, all of which are single-building sites, and none of which are multi-building sites like the subject. The Complainant combined the areas of the two subject buildings; derived an average year of construction of the two subject buildings; and assumed an average level of finish of 93%. She proceeded to compare the combined data from the two buildings to five single buildings. She argued that the two "best" comparables to the subject are located at 610 Moraine RD NE and 2801 – 18 ST NE. The Complainant argued that these single-building industrial facilities have similar total assessable area, age of construction, and site coverage as the subject. She argued that these sales support a lesser assessed value for the subject.

[10] The Complainant argued that she had made several "adjustments" to the five sales and provided the Board and Respondent with verbal explanations but no written details of those calculations. She clarified that by using a "residual land value" technique, she had "backed out" and later "added back in" the land portion of the properties to help refine her calculations since "land value is the biggest factor in overall value". She argued that by adjusting the "key factors" for each of her five market sales comparables, this led her to conclude that a market sales approach value of \$1,870,000 is warranted for the subject.

[11] The Complainant also argued that the subject has suffered considerable chronic vacancy since the subject was purchased in 2007. She argued therefore that a further reduction of \$189,000 – based on a "Rent Loss Calculation" on page 20 of C-1, should be deducted from the market sales based value conclusion of \$1,870,000 – all to arrive at an adjusted value of \$1,681,000.

[12] The Respondent provided four market sales to compare to the large building onsite, each of which reasonably matched the individual site characteristics of parcel size; assessable building area; age; and site coverage. These time-adjusted sales demonstrated a range of values of \$123.23 to \$157.84 per SF. She also provided two sales to support the value placed on the smaller building onsite. The two sales provided a small range of values ranging from \$265.17 to \$343.77 per SF. Since the subject is assessed at a corrected \$130.13 and \$196.75 per SF based on the City's analysis of 164 property sales, she argued that these sales provide a range of values that support the assessment.

[13] The Respondent argued that the Complainant's five sales are not comparable to the subject because they are single-building sites whereas the subject is a multi-building site receiving a multi-building discount to its assessed value. She argued that the Complainant has simply combined the separate and distinct building areas of the subject's two buildings, and compared the results to single-building sites. Therefore she argued, not only is this flawed methodology, but this process skews the results of the Complainant's value analysis such that it is unreliable as an indicator of value.

[14] The Respondent argued that in the Sales Comparison Approach to Value, there is no professionally-recognized methodology for adjusting a property for chronic vacancy, or indeed any other site-specific financial variable as the Complainant has proposed. She argued therefore that the Complainant's methodology is flawed and the resulting value conclusion of \$1,681,000 should be considered by the Board to be unreliable.

[15] The Respondent also argued that the Complainant has used faulty methodology to make several "adjustments" to the Complainant's five sales. She argued that the Complainant has provided the Board and Respondent with verbal explanations but no written details of those calculations. She also argued that by using a "land residual" technique, of "backing out" and later "adding back in" the land portion of the properties to refine her calculations is a flawed technique not used in Mass Appraisal.

[16] In its review of this issue, the Board found that the Complainant had not informed either the Board or the Respondent as to the details of the former's market sales adjustments, which, in concert with the fact that all of the Complainant's five market sales are single-building sites and the subject is not, meant that the Board placed little weight on the Complainant's calculations of value using this methodology.

2. Assessment to Sale Ratio:

[17] The Complainant provided a critique of the City's assessment model, arguing that the "key factors" in it "do not work" and "do not explain what is going on with these properties" and hence it provides erroneous assessment values. She noted she had analyzed the City's list of 164 sales of industrial warehouse properties used in the model, to arrive at this conclusion. She provided the results of the analysis and calculations, illustrating the minimum, maximum, median and mean time-adjusted assessment to sales ratios. She identified the coefficients of dispersion and variation of these ratios. She argued that it is the position of the International Association of Assessing Officers (IAAO) that the overall ratios should not be greater than 5% but the City's model has exceeded that value.

[18] The Respondent noted that the Complainant had not provided the list of properties used in her analysis, nor had she provided the analysis itself, and therefore it was not possible to verify the Complainant's methodology or conclusions.

[19] The Board found that the Board in CARB 1825/2012-P, faced with a highly similar if not identical issue, concluded in paragraphs [10], [11], and [12] that:

[10]....."Without the analysis that supports the Complainant's conclusions, it is not possible to form an opinion on the results.

[11] In any event, it is not the Board's role to rule on the validity of the Respondent's asset range. *Matters Relating to Assessment and Taxation Regulation* AR 220/2004 MRAT), s.10 in particular, governs the quality standards and procedures established through the Alberta Assessment Quality Minister's

Guidelines and s. 293 of the Act.

[12] The Complainant's position on the assessment to sales ratio carried little weight in the Board's deliberations on the merits of the Complaint."

[20] The Board also finds on the face of the evidence in this hearing that it places little weight on the Complainant's arguments regarding the alleged inaccuracy of the City's model, and the assessment to sale ratios derived therefrom.

3. Cost Approach:

[21] The Complainant provided a "Summary Report" for each of the two buildings on the subject using Marshall and Swift (M&S). She also confirmed she had used \$800,000 per Ac. for the land. When combined with the calculations for the onsite improvements, the results indicated an overall value for the subject's two buildings of \$1,390,000. She suggested that normally an M&S value would determine the higher end of a valuation range using a variety of valuation methodologies, but in this instance it indicated a value at the lower end of the range.

[22] The Complainant argued that she had estimated the "effective age" of the larger improvement at 39 years (as of July 1, 2011) because of its 1972 construction, and therefore she depreciated it by 70% based on a potential lifespan of 40 to 50 years. She depreciated the smaller 1976 "Storage Garage" building at 71%. The Complainant advised that she had used other M&S valuation inputs for wall heights, HVAC, etc. based on typical components for a Storage Warehouse or Storage Garage of the subject's era. The detail of the inputs and calculations were not provided.

[23] The Respondent argued that the Cost Approach To Value is generally used to assess "special purpose" buildings, and not typical warehouse properties such as the subject. She noted that the Complainant, while using Marshall and Swift, had identified the main building on the subject as "100% Storage Warehouse". In addition the Respondent argued that the Complainant's inputs and detailed calculations for M&S, which appear to be incorrectly applied, are not available and therefore they cannot be evaluated by either the Respondent or the Board.

[24] The Board found that notwithstanding the potentially flawed methodology used by the Complainant in this approach, it is not relevant to the subject which is a typical industrial warehouse and not a special purpose building. Therefore the Board placed little weight on this approach.

4. Capitalization Rate:

[25] The Complainant produced a cap rate study of industrial properties "over 100,000 SF- New Construction" and provided a table containing four market sales to support the results. She argued that Altus had used actual rents from leases in the four sites at time of sale, and a 4% vacancy (rounded down from average 4.6%) taken from third-party industry publications, to calculate median cap rates of 7.66% (stabilized NOI) and 7.47% (market NOI). She clarified that in certain instances where rents were unavailable, rents from other properties such as Calgary International Airport were used. She argued that Altus had concluded that 7.5% appeared to be a "reasonable cap rate for new, over 100,000 SF buildings."

[26] The Respondent argued that the Complainant's methodology is flawed because rents from Calgary International Airport Federal Government properties are significantly different than rents elsewhere in Calgary and should not be intermixed to arrive at valuation conclusions. In addition, in the Complainant's cap rate analysis, there is no allowance for expenses to be deducted which skews the results. She also argued that it is incorrect to analyze four new buildings of 302,135 SF; 146,135 SF; 178,009 SF; and 118,402 SF and then compare the results to the subject's two-building total 16,714 SF.

[27] The Respondent provided three market sales of industrial properties and argued that their individual characteristics of parcel size; assessable area; age; site cover; and time-adjusted sales values very closely matched the subject. She also provided seven assessment equity comparables and argued that their individual site characteristics also closely matched the subject and provide a range of values that support the assessment as fair and equitable. She argued that this evidence supports the assessment.

[28] In its review of the evidence on this issue, the Board found that it is not appropriate to compare rents from Calgary International Airport leased sites to other "freehold" property leases from off-airport sites. More significantly however, the Board found that comparisons of properties of well over 100,000 SF, and indeed in one instance over 300,000 SF, to the subject's two-building total at 16,714 SF is, in the Board's view, unreliable. Therefore the Board placed little weight on the Complainant's evidence and argument in this issue.

5. Income Approach:

[29] The Complainant clarified that the subject has been vacant since 2008 and is expected to be vacant for several more years. Because the site is vacant, she provided an Income Approach to Value calculation for the subject using actual rents from three nearby properties to define a "typical" rent value to use for the large building on the subject. She identified 1880 Centre AV SE having a rent of \$6.50 per SF for about 73,000 SF; 2020 Centre AV SE and a rent of \$7.25 per SF gross for about 88,000 SF; and 1939 Centre AV SE with a rent of \$3.50 per SF – also for a larger (undefined) space than the subject. She clarified that she was unable to use comparables the same size as the subject because the Altus database was "not up-to-date". Nevertheless, she calculated that a "typical" rent applicable to the subject would therefore be \$7.50 per SF. She postulated that "based on experience", \$5 per SF is also reasonable for the garage.

[30] The Complainant also clarified that she had used an "elevated 7.75% cap rate" instead of the 7.5% from the Altus cap rate study because she considered the subject to be an older building with greater risk, which was supported by the fact that it has been vacant for several years. The Complainant argued that her Income calculations, including a \$189,444 rent loss, indicate an alternate value for the subject of \$1,311,311.

[31] The Respondent argued that there are 164 valid market sales which have been shared with the Complainant and therefore there is no need to value the subject using this methodology. She reminded the Board that the subject has been assessed using the Sales Comparison Approach and not the Income Approach. Moreover, she argued that in using the Income Approach, the Complainant's methodology is incorrect because there is no documented support for the 7.75% cap rate.

[32] In addition, the Respondent argued that while the Complainant has relied on third-party reports for her vacancy rate, the Altus-calculated value is 4.6% and not 5%. She also noted that while the Complainant has argued for 100% vacancy, she used only 5% in her calculation. She argued that contrary to the assertions of the Complainant, a large or small difference in vacancy rates can be significant when calculating assessments. The Respondent also noted that the three comparables used by the Complainant to secure a "typical" rent rate are significantly larger than the subject, and hence the rent values extracted from them cannot be reliably compared to the subject.

[33] In its review of this issue, the Board found that there was no documented support for either the 5% vacancy rate or the 7.75% cap rate used in the Complainant's calculation of alternate value using this methodology. In addition, the Board notes that the "typical" rent value developed by the Complainant for use in calculating the "Income" value of the subject, is unreliable because the three properties from which the Complainant derives her rents, are five to six times larger than the subject's combined building area. The Board placed little weight on the Complainant's evidence/argument in this approach.

Respondent's Corrected Valuation

[34] The Complainant argued that the City's revised assessment of \$2,250,000, based on correcting the amount of finished area of the subject, means a reduction of approximately \$2 per SF and this is insufficient.

[35] The Respondent argued that in the City's model, one of the key factors is level of finish, which works in concert with other variables to produce certain values. In this instance the reduced level of finish parameter of 48% would be mixed with other model variants to produce the revised assessment value of \$2,250,000. She clarified that the City supports the \$2,250,000 corrected value.

Board's Findings with Reasons:

[36] The Board finds with respect to sales comparison, the Complainant's adjustments to her property comparables were not documented, which raised doubt about their comparability to the subject. In addition, the Complainant's sales were all of single-building properties which the Complainant attempted to compare to the subject's two-building composite values which is erroneous methodology. Therefore the Board afforded little weight to the Complainant's requested value under this approach.

[37] The Board finds that the Complainant was unable to convince the Board on the basis of the evidence and argument presented that the key variables in the City's assessment model are flawed.

[38] The Board finds that while certain documentary evidence as to the source of the inputs used by the Complainant to calculate the Cost Approach for the subject is lacking, nevertheless it recognizes that this approach is generally applied to "special purpose" buildings and not to typical multi-purpose warehouse properties like the subject. Therefore the Board finds that it gives very little weight to the Complainant's position on this issue.

[39] The Board finds that the Capitalization rate calculated by the Complainant on the basis of four relatively new buildings (as compared to the subject – a 1977 building) over 100,000 SF, to be flawed. The Complainant did not deduct any expense items, and used rents from Calgary International Airport instead of from off-airport properties to deduce values. Had expenses been deducted for example, one would expect the cap rate to be lower. In this regard, the following extract from *Westcoast Transmission Company Limited v. Assessor for Area 9 (Vancouver) 1987 BCSC 235* is relevant:

"I stated above that the concepts used, in developing capitalization rates for application to the subject, should be used consistently. Thus it makes no sense to develop a capitalization rate on one set of assumptions about long-term vacancy rates, long-term rents, and long-term expenses, and then apply that rate to the income of the subject property that is not derived in the same way.

The choice of a vacancy rate goes directly into the calculation of gross income, from which the appraiser then deducts expenses to arrive at an estimate of net income. All of these factors, for consistency, should be used in the same manner as they were used in the study of comparables which resulted in the development of the capitalization rate. To do otherwise is to offend appraisal theory, and is likely to produce a mistaken result."

[40] The Board finds that the Complainant's income approach is unreliable because the vacancy rate of 5% and cap rate of 7.75% used in the Complainant's calculation are unsupported. Moreover, the Complainant's calculations of "Rent Loss" rely on speculative rent values, and assumptions of future extended vacancy behaviour respecting the subject. The foregoing therefore casts doubt on the reliability of the alternate assessment value the Complainant seeks for the subject using this methodology.

[41] The Board concurs with the Respondent that the correction to the level of finish from 100% to 48% for the subject indicates a revised and corrected assessment of \$2,250,000 as fair and equitable.

Board's Decision:

[42] The assessment is corrected and reduced to \$2,250,000.

DATED AT THE CITY OF CALGARY THIS 13 DAY OF November 2012.

K. D. Kelly
Presiding Officer

APPENDIX "A"

**DOCUMENTS PRESENTED AT THE HEARING
AND CONSIDERED BY THE BOARD:**

NO.	ITEM
1. C-1	Complainant Disclosure
2. C-2	Complainant Disclosure – Rebuttal
3. R-1	Respondent Disclosure

An appeal may be made to the Court of Queen's Bench on a question of law or jurisdiction with respect to a decision of an assessment review board.

Any of the following may appeal the decision of an assessment review board:

- (a) *the complainant;*
- (b) *an assessed person, other than the complainant, who is affected by the decision;*
- (c) *the municipality, if the decision being appealed relates to property that is within the boundaries of that municipality;*
- (d) *the assessor for a municipality referred to in clause (c).*

An application for leave to appeal must be filed with the Court of Queen's Bench within 30 days after the persons notified of the hearing receive the decision, and notice of the application for leave to appeal must be given to

- (a) *the assessment review board, and*
- (b) *any other persons as the judge directs.*

For Administrative Use Only
