This is a decision of the Composite Assessment Review Board (CARB) from a hearing held on October 22, 2010, respecting a complaint for:

<b>Roll Number</b> 10033069	<b>Municipal Address</b> 3103 137 Avenue NW	<b>Legal Description</b> Plan: 0521766 Block: 150 Lot: 96
<b>Assessed Value</b> \$13,474,000	<b>Assessment Type</b> Annual - New	<b>Assessment Notice for</b> 2010

#### **Before:**

Robert Mowbrey, Presiding Officer  
John Braim, Board Member  
Tom Eapen, Board Member

**Board Officer:** Annet N. Adetunji

#### **Persons Appearing: Complainant**

Tom Janzen, Canadian Valuation Group

#### **Persons Appearing: Respondent**

Bozena Anderson, Assessor, City of Edmonton  
Cameron Ashmore, Barrister and Solicitor, City of  
Edmonton

## **PRELIMINARY MATTERS**

1. Upon questioning by the Presiding Officer, the parties indicated no objection to the composition of the Board.
2. In addition, the Board advised the parties that the Board was not aware of any circumstances that would raise an apprehension of bias with respect to this file.
3. The Board had those individuals providing testimony either sworn or affirmed.

## **BACKGROUND**

The subject property is a 94 suite low rise apartment building located in market area 11. It was built in 2008 with four stories and is in average condition. The property has elevators. The total 2010 assessed value for the property is \$13,474,000 which equates to \$143,340 per suite.

## **ISSUE**

Is the assessment of the subject property in excess of its market value?

## **LEGISLATION**

***The Municipal Government Act, R.S.A. 2000, c. M-26;***

*S.467(1) An assessment review board may, with respect to any matter referred to in section 460(5), make a change to an assessment roll or tax roll or decide that no change is required.*

*S.467 (3) An assessment review board must not alter any assessment that is fair and equitable, taking into consideration*

- a) the valuation and other standards set out in the regulations,*
- b) the procedures set out in the regulations, and*
- c) the assessments of similar property or businesses in the same municipality.*

## **POSITION OF THE COMPLAINANT**

At the commencement of the hearing, the Complainant informed the Board they were not pursuing the argument pertaining to the equity issue or multiplier used by the Respondent put forth in the complaint reasons.

The position of the Complainant is that the capitalization rate (cap rate) is the best method of estimating the market value of the subject property for assessment purposes as rental producing apartment properties are most commonly bought and sold on the overall capitalization approach in which a rate of return (cap rate) is applied to the net income after the operating expenses have been deducted (Exhibit C-1, pages 1-3).

The Complainant did not disagree with the Respondent's estimate of potential typical income and vacancy which had been applied to the subject building. The Complainant provided a partial income statement and rent roll as the subject property was not fully occupied until late 2009 and only partial statements were available. The Complainant provided a list of expenses, on both a price per suite and an expense percentage basis, that were taken from 8 low-rise apartment

buildings(Exhibit C-1, page 2). The expenses ranged from \$2,915 to \$3,991 per suite. The Complainant used an expense figure of \$4,000 per suite for the subject property. The Complainant deducted the operating expenses from the Complainant's effective gross income to arrive at the net operating income. The Complainant stated the average cap rate was 6.92% and the median cap rate was 7.23%. The Complainant deduced that 7.00% was the appropriate cap rate for the subject property.

The Complainant applied a cap rate of 7.00% and the Complainant's expenses on a per suite basis to the City of Edmonton's potential gross income of \$1,280,223 (PGI – 4% vacancy and \$4000 expenses per suite). This produced a net operating income of \$853,014 and a value of \$12,185,500 or \$129,637 per suite.

The Complainant advised the Board that comparables seven and eight are most similar to the subject property. The time adjusted sale price per suite for comparables seven and eight are \$109,836 and \$103,186 respectively. Therefore, with respect to the direct comparison approach, a value of \$110,000 per suite should be considered reasonable. The Complainant used the Respondent's time adjustment factors for 2010 multi- residential properties.

In support of their cap rate, the Complainant provided a third party report from Cushman & Wakefield (Exhibit C-1, page 17). The chart indicated the overall cap rate for multi-family residential sales in Edmonton was 6.7%.

The Complainant requested a reduction in the 2010 assessment from \$13,474,000 2010 to \$11,500,000 based on the City's potential income and the direct sales comparison approach.

### **POSITION OF THE RESPONDENT**

The Respondent produced a binder for the low rise multi-residential properties under appeal on October 22, 2010. The binder has 15 tabs and is 169 pages. The Respondent reviewed the binder with the Board.

The Respondent advised the Board that the Gross Income Multiplier (GIM) is the correct method of estimating the value of the subject property and was the method used. A GIM is predicted by a model developed from the analysis of validated sales. The model is applied to the entire low rise inventory to produce an estimated typical GIM for each property as of July 1, 2009 (Exhibit R-1, page 7).

The Respondent advised the Board of the valuation specifications and significant variables regarding the model. The Respondent advised that the typical vacancy rate was 4% in market area 11.

The Respondent reviewed some sections of the Appraisal of Real Estate with the Board;

(Exhibit R-1 Tab 2, page 16), "Deriving capitalization rates from comparable sales is the preferred technique when sufficient data on sales of similar, competitive properties is available. Data on each property's sale price, income, expenses, financing terms, and market conditions at the time of sale is needed. In addition, the appraiser must make certain the net operating income of each comparable property is calculated and estimated in the same way that the net operating income of the subject property is estimated."

(Exhibit R-1 Tab 2 page 18), an overall capitalization rate provides compelling evidence of value when a series of conditions are met:

- Data must be drawn from properties that are physically similar to the property being appraised and from similar (preferably competing) markets. Where significant differences exist for a given comparable, its indications are afforded less weight or may be discarded entirely.
- Sale properties used as sources for calculating overall capitalization rates should have current date of sale and future market expectations, including income and expense patterns and likely value trends, that are comparable to those affecting the subject property.
- Income and expenses must be estimated on the same basis for the subject property and all comparable properties.
- The comparable property's price must reflect market terms, or an adjustment for cash equivalency must be possible.
- If adjustments are considered necessary for differences between a comparable and the subject property, they should be made separately from the process of calculating the overall capitalization rate and should be based on market evidence.

The Respondent stated that the Complainant did not give any evidence or vacancy allowance in the disclosure to dispute the vacancy rate used by the City (Exhibit R-2, page 13). The income conversion factor, whether cap rate or GIM, should be applied to the same type of income for the comparables as the subject. When buying a property, a purchaser will consider the opportunity to increase rents when negotiating the purchase price. With the income increased to market, a purchaser can't pay the same multiple as when the rents are low as the potential to increase rents is no longer there.

One cannot simply take an average of cap rates from sales - a cap rate reflects specific characteristics of the sale. This includes:

- Income level (risk to the income stream) and
- Required rate of return to the investor (based on the income in place and the physical attributes of the property, such as age, condition and size of the overall investment).

The Respondent provided the Board with a chart detailing four sales of larger investment walk-up apartment buildings (Exhibit R-1, page 158) that had sold in 2009 (2 sales) and 2008 (2 sales). The time adjusted sale price per suite ranged from \$101,162 to \$124,107. The sales were similar to the subject property in terms of age, condition and number of stories. The median time adjusted sale price per suite is \$105,620 which is substantially lower than the assessment of the subject property at \$143,340. The average time adjusted sale price per suite is \$109,127, which again is substantially lower than the assessment per suite of the subject property.

When the Respondent's "typical" PGR and "typical" vacancy are applied to the four comparable sales (2<sup>nd</sup> part of chart), the comparable sales provide GIMs ranging from 10.33 to 11.04, which support the assessment of 11.35.

The second part of the chart also provided the same sales using typical potential gross rents (PGR) and typical vacancies as opposed to the actual PGR and vacancy provided by the Network documents. In this chart, when "typical" rents and "typical" vacancy are used and after the deduction of expenses of \$3,400 per suite, a cap rate of 6.44% is produced. When applied to the

net operating income (NOI) of \$868,016, the indicated value is \$13,478,500 which supports the assessment of \$13,474,000.

The Respondent provided the Board with four equity comparables, all located in market area eleven. The comparables were similar in terms of age, condition, number of suites and all had elevators. The median of the four equity comparable is \$126,054 per suite which is substantially less than the subject property's assessment of \$143,340 per suite.

The Assessor advised the Board that a site inspection had recently been completed. The inspection revealed that the subject property was the most superior building in the entire neighborhood and there were a number of amenities in close proximity to the subject property including the LRT.

The Respondent also challenged the Complainant in using a comparable in a municipality outside of the City. The Respondent stated the comparable would not fall within the mass appraisal methodology of the City.

The Respondent advised the Board that the Complainant's methodology was flawed and indicates a misleading representation of value.

## **DECISION**

The decision of the Board is to confirm the 2010 assessment of \$13,474,000 as fair and equitable.

## **REASONS FOR THE DECISION**

1. The GIM of the subject property at 11.35 is lower than from all of the sales comparables and supports the subject's 2010 assessment.
2. The Board was persuaded by the equity comparables put forth by the Respondent on large investment walk- up apartments. The median per suite of the five comparables is \$125,288 which is slightly lower than the per suite assessment of \$126,991.
3. The Board notes that the City is predicting a potential gross income for the subject property to be \$1,237,100 whereas the subject property is actually generating \$1,491,100, making the Board question why the assessment should be altered when the actual income achieved is higher than the potential/typical income that the City uses.
4. The Board accepts the procedure of selecting a median value and a sample of four is an acceptable number of sales for the mass appraisal method stratification model.
5. The Board placed little weight on the Complainant's third party support information from Cushman and Wakefield as it covered the entire City of Edmonton and it was not broken down into areas. In addition, the report was not broken down into specific types of multi-family properties such as high rise, low rise and row houses.

6. The Board accepts that the cap rate approach is an accepted methodology for valuation. However, the Board was not persuaded by the Complainant's use of the cap rate approach (C-1, page 2). The Complainant had supplied seven comparable sales all close to the subject property to derive the expenses per suite and also a cap rate for the subject property. However, the Board did note that the comparable properties put forth by the Complainant were not comparable to the subject property. The comparables were older and some were much smaller. In addition, not all the comparables had elevators.
7. The Board notes the subject property has a number of amenities within the complex and is in close proximity to a number of other amenities, including the LRT.
8. The Board notes the subject property has a superior suite mix than the comparables put forth by the Complainant. 93% of the subject property's suite are two bedroom, whereas the comparables are 39% to 64%. In addition, the City does not assess the two bedroom and den separately, but only assesses the two bedroom and den as a two bedroom.
9. The Board notes there was little evidence or documentation on the sales expenses to support the figure provided by the Network.
10. The Board questioned the use of a comparable outside the municipality of the City of Edmonton.
11. The Board concluded that the Complainant is using inconsistent methodology to value the subject property. The Complainant is applying GIMs and cap rates derived from the Network's reported actual income to the Respondent's typical income. This inconsistency results in an unreliable estimate of market value. The Board believes that, under appraisal theory, typical income, vacancy and cap rates should be derived and applied in the same consistent manner.
12. The Board therefore concludes that the Complainant did not provide sufficient or compelling evidence to alter the assessment.

### **DISSENTING OPINIONS AND REASONS**

There was no dissenting opinion.

Dated this 16<sup>th</sup> day of November, 2010, at the City of Edmonton, in the Province of Alberta.
