

Edmonton Composite Assessment Review Board

Citation: CVG v The City of Edmonton, 2013 ECARB 01504

Assessment Roll Number: 4110763

Municipal Address: 10416 81 Avenue NW

Assessment Year: 2013

Assessment Type: Annual New

Between:

CVG

Complainant

and

The City of Edmonton, Assessment and Taxation Branch

Respondent

DECISION OF
George Zaharia, Presiding Officer
Brian Carbol, Board Member
Brian Frost, Board Member

Procedural Matters

[1] When asked by the Presiding Officer, the parties did not object to the composition of the Board. In addition, the Board Members indicated no bias in the matter before them.

Preliminary Matters

[2] There were no preliminary matters.

Background

[3] The subject property is a 1-storey retail building located at 10416 81 avenue NW in the Queen Alexandra neighbourhood of south-central Edmonton. The building was built in 1959 and has an effective year built of 1970. It is in average condition, and has a gross building area of 19,285 square feet that includes a basement area of 9,400 square feet. The building is situated on a lot 17,396 square feet in size.

[4] The subject property was valued on the income approach using a capitalization rate (cap rate) of 7.0% resulting in a 2013 assessment of \$1,982,000.

Issues

[5] Is the 7.0% cap rate applied to the subject property to calculate the 2013 assessment of the subject property too low?

[6] Is the 5% vacancy rate applied to the main floor space too low?

Legislation

[7] **The Municipal Government Act, RSA 2000, c M-26, reads:**

s 1(1)(n) “market value” means the amount that a property, as defined in section 284(1)(r), might be expected to realize if it is sold on the open market by a willing seller to a willing buyer;

s 467(1) An assessment review board may, with respect to any matter referred to in section 460(5), make a change to an assessment roll or tax roll or decide that no change is required.

s 467(3) An assessment review board must not alter any assessment that is fair and equitable, taking into consideration

(a) the valuation and other standards set out in the regulations,

(b) the procedures set out in the regulations, and

(c) the assessments of similar property or businesses in the same municipality.

Position of the Complainant

[8] In support of his position that the 2013 assessment of the subject property is excessive, the Complainant presented a 30-page brief (Exhibit C-1) and a 9-page rebuttal (Exhibit C-2). The Complainant considered the rental rates and allowances (except for the vacancy rate) used by the City in determining the NOI reasonable, but argued that based on an analysis of the cap rates from the eleven sales, and an analysis of an equity cap rate study of ten properties that he put forward, a cap rate of 7.5% would be more appropriate in determining the value of the subject property.

[9] In support of this position, the Complainant provided eleven comparable sales of properties similar to the subject. The comparables sold between March 2011 and May 2012, ranged in size from 5,500 to 139,962 square feet, had NOIs ranging from \$11.48 to \$30.12 per square foot, and sold for cap rates that ranged from 6.54% to 7.23%. The Complainant stated that sale nos. 2, 3, 4 and 8 are parts of larger retail projects with major “shadow” anchors with incomes considered more stable than the subject’s. Based on sale nos. 5, 7, 8 and 9 that have the most similar NOIs per square foot compared to the subject, the Complainant considered a cap rate of 7.5% as being reasonable to be applied to the subject property instead of the 7.0% applied by the City. (Exhibit C-1, page 2)

[10] The Complainant also submitted ten equity comparables to demonstrate that the 7.0% cap rate applied to the subject property was too low. The comparables ranged in age from 1976 to 2004, and in building size from 12,903 to 51,542 square feet. One of the comparables was assessed based on a cap rate of 6.5%, three on a cap rate of 7.0%, and six on a cap rate of 7.5%. The Complainant argued that it was inequitable to compare the one property assessed with a cap rate of 6.5% to the subject. Comparable no. 10 known as Main on Whyte is the newest and best located property on Whyte Avenue. The equity comparables were considered as all good quality retail centres, and for the most part located on main thoroughfares. (Exhibit C-1, page 2 and 3)

[11] With regards to the vacancy rate applied to the subject, the Complainant stated that “*the building has been vacant for a lengthy period as the structure is slated for demolition in the near*

future.” In his opinion, the vacancy rate of 5% for the main floor space was too low and should be increased to the 20% vacancy rate applied to the basement space. By applying this higher rate to the main floor space, the City’s NOI would be reduced from \$138,752 to \$116,187.

[12] Based on an analysis of the sales and equity comparables, the Complainant suggested that a cap rate of 7.5% would be more appropriate. Also, by increasing the main floor vacancy rate to 20%, this would result in a revised NOI of \$116,187. By capitalizing this revised NOI by the higher cap rate of 7.5%, the assessment would be reduced to \$1,549,160. (Exhibit C-1, page 3)

[13] In response to a question from the Respondent, the Complainant acknowledged that no adjustments were made to the selling price and NOI of the nine sales comparables to bring the values to the July 1, 2012 valuation date.

[14] The Complainant submitted a rebuttal, taking exception to the cap rates calculated by the Respondent on page 15 of Exhibit R-1. Rather than using the time-adjusted sale price determined by the Respondent and dividing it into the City predicted NOI, he used the 2013 assessments of the eight sales to divide into the City predicted NOI, resulting in all the cap rates increasing.

[15] In summation, the Complainant argued that if the NOI and the sale price at the time of the sale are used at some point after the sale, that the relationship is maintained. He also argued that his sales were better, using income at the time of the sale that an investor would know, rather than the hypothetical or “predicted NOI” used by the Respondent.

[16] In conclusion, the Complainant requested that the 2013 assessment of the subject property be reduced from \$1,982,000 to \$1,550,000.

Position of the Respondent

[17] The Respondent stated that the 2013 assessment of the subject was fair and equitable. To support his position, the Respondent presented a 95-page assessment brief (Exhibit R-1) that included law and legislation. He also presented a 10-page sur-rebuttal (Exhibit R-2).

[18] The Respondent provided a cap rate study broken into two groups: 1) “Cap Rate Study (Area Based)” – group one, and “Cap Rate Study” – group two. Each study was based on four sales. The sales in group one occurred between December 2, 2011 and May 17, 2012. The sales resulted in stabilized cap rates that produced an average of 5.72% and a median of 5.6%, supporting the 7.0% cap rate applied to the subject property. The sales in group two occurred between July 4, 2011 and June 7, 2012. The sales resulted in stabilized cap rates that produced an average of 6.38% and a median of 6.38%, suggesting that the 7.0% cap rate applied to the subject property is not too low. The Respondent advised that sale comparables nos. 6, 7, and 8 of group two were located in an inferior location compared to the subject. In arriving at the predicted cap rate, the Respondent had predicted the NOI of the eight properties by using typical rental rates and dividing the resulting NOIs by the time-adjusted sale prices of the eight sales. (Exhibit R-1, page 15)

[19] In support of the position that the subject was equitably assessed, the Respondent provided a “Cap Rate Equity Comparables” chart of seven properties in close proximity to the subject. All seven of the comparables were assessed using a cap rate of 7.0% (Exhibit R-1, page 27). In addition, the Respondent provided an assessment map of these seven properties, confirming the close proximity of the comparables to the subject (Exhibit R-1, page 28).

[20] The Respondent provided a review of the Complainant's eleven sales comparables used in his cap rate study. The cap rates as provided by the Complainant were taken from the Network's sale reports that reflected the sales price and NOI at the time of sale. The sales occurred between March 2011 and May 2012 that resulted in an average cap rate of 6.96% and a median cap rate of 7.02%. However, when the sale prices were time-adjusted, and the NOI was calculated using typical values as at the July 1, 2012 valuation date, the average fee simple cap rate was reduced from 6.96% to 6.71% and the median time-adjusted fee simple cap rate was reduced from 7.02% to 6.77%. (Exhibit R-1, page 29)

[21] The Respondent provided a CARB decision (2013 ECARB 00860) dated September 4th, 2013 wherein the Board opined that *"third party publications such as the Network are difficult to evaluate as it is unclear what parameters were used in establishing the cap rates. It is important that the methodology is consistent in the derivation and application of the factors used to calculate the cap rate. For example if the Network uses actual income figures, it should not be used in conjunction with typical data the City is mandated to use in the assessment process."* (Exhibit R-1, page 36, paragraph 45)

[22] The Respondent provided a second CARB decision (2013 ECARB 01272) dated September 10th, 2013 addressing the shortcomings of third party information. The Respondent paraphrased a point made by the CARB that there were *"too many unknown variables"* when using information provided in third party reports. In the decision, the CARB wrote *"The Board recognizes that third-party sources are at the mercy of owners as to what information they choose to disclose, or even how the books are kept. As an example, where triple-net leases were implied, the operating expenses per square foot showed an unexpectedly wide variance. In absence of any evidence showing the sources of information input and the methodology used to arrive at the results produced, the Board put less weight on such evidence."* (Exhibit R-1, page 81, paragraph 28)

[23] The Respondent provided a sur-rebuttal, making corrections to the two cap rate studies that had been presented in Exhibit R-1, page 15, stating that the revised numbers reflect the 2013 assessment values, rather than the originally applied numbers. He also added a column to the chart that had been presented in Exhibit R-1, page 15 that showed the assessed cap rates for the eight comparable sales. These assessed cap rates ranged from 6.5% to 7.5%. (Exhibit R-2, page 2) In support of this information, the Respondent provided copies of the City of Edmonton Detail Reports for the eight properties.

[24] In summation, the Respondent pointed out that the Complainant did not have any problem with the City's NOI, other than to revise it based upon an increased main floor vacancy rate. He again referred to the two CARB decisions that questioned the use of third party derived cap rates.

[25] In conclusion, the Respondent requested that the Board confirm the 2013 assessment of the subject property at \$1,982,000.

Decision

[26] The decision of the Board is to confirm the 2013 assessment of the subject property at \$1,982,000.

Reasons for the Decision

[27] The Board considered, but ultimately placed less weight on the evidence and argument put forward by the Complainant for the following reasons:

- a) The Complainant provided eleven sales comparables, and relied upon the cap rates provided by a third party source (The Network) derived from the NOI and sale price at the time of the sale, up to 16 months prior to the July 1, 2012 valuation date.
- b) Based on the information submitted by the Complainant, gleaned from third party sources, it would appear that the cap rate applied to the subject was too low. However, when the Respondent time-adjusted the sale prices to the July 1, 2012 valuation date and revised the NOI based on typical rental rates (that the Respondent is mandated to use by regulation), the average cap rate was reduced to 6.71% cap rate, less than the 7.0% cap rate applied to the subject, while the median was increased to 7.02%, slightly higher than the subject's applied cap rate.
- c) The Complainant provided ten equity comparables. Only two of the comparables were in close proximity to the subject, with one being assessed with a 6.5% cap rate, and the other being assessed with a 7.0% cap rate, the same as the subject. The balance of the equity comparables were from all over the city, some at far distances from the subject and the Board was not persuaded that these were good comparables.
- d) The Complainant challenged the City's predicted cap rates. The Complainant suggested instead that the 2013 assessed values of the comparables should be used rather than the time-adjusted sale price. By dividing the assessed value into the predicted NOI, the resulting average cap rate for group one of 7.6% and median cap rate of 7.4%, and the resulting average cap rate for group two of 7.4% and median cap rate of 7.5% would suggest that the 7.0% cap rate of the subject is too low. However, this method of calculating a cap rate is not consistent with the cap rate derived from the NOI and sale price of a property when a buyer is considering "risk". In the case of the subject property, its assessed cap rate of 7.0% is well supported by the cap rates of group one (average of 5.72% and median of 5.60%), and by the cap rates of group two (average of 6.38% and median of 6.38%) derived from the parameters that an investor would depend upon in deciding whether or not to invest in a particular property. Therefore, the Board placed little weight on the Complainant's suggested method of determining a cap rate.
- e) Although this Board is not bound by decisions rendered by other CARBs, this Board agrees with the positions taken by the other two CARBs in the September 2013 decisions. Specifically, this Board agrees with the statement made by the CARB in 2013 ECARB 00860 where the CARB wrote: *"It is important that the methodology is consistent in the derivation and application of the factors used to calculate the cap rate. For example if the Network uses actual income figures, it should not be used in conjunction with typical data the City is mandated to use in the assessment process."*
- f) The Board did not have any concrete evidence upon which to make a change to the main floor vacancy rate of the subject property. The only reference to occupancy that the Board could find was in the Respondent's brief that indicated that as at 03/04/2011, the subject property was "100% owner occupied". When the Complainant was asked what the occupancy status was at the condition date of December 31, 2012, he responded that he did not know.

[28] The Board placed greater weight on the evidence and argument put forward by the Respondent for the following reasons:

- a) The cap rates derived by the Respondent in his "Cap Rate Study" chart were based upon parameters as of the July 1, 2012 valuation date. The resulting average cap rate for group one of 5.72% and median cap rate of 5.60%, and the resulting average cap rate for group two of 6.38% and median cap rate of 6.38%, suggest that the 7.0% cap rate applied by the City in calculating the 2013 assessment of the subject property is not too low. As much as the Complainant argued that the incomes used by the Respondent in calculating the NOI as of the valuation date were "hypothetical", he had stated in his evidentiary package that the "*income estimate utilized by the City are considered reasonable*". As well, typically the Complainant utilizes the time-adjustment factors used by the City in time-adjusting sale prices to the valuation date. Therefore, this Board found no reason to question the validity of the "Predicted City Cap Rates" as calculated in its study.
- b) The Board is satisfied that the subject property was equitably assessed using the 7.0% cap rate, in that this cap rate was applied to other similar retail properties in close proximity to the subject.
- c) The Board was persuaded that the Respondent prepared the assessment of the subject property in accordance with s. 2(a) the *Matters Relating to Assessment and Taxation Regulation* that states: "*An assessment of property based on market value must be prepared using mass appraisal*".

[29] The Board noted that both parties used different types of properties within the retail group such as neighbourhood shopping centres, office buildings, retail/apartment up, and retail plazas to support their respective positions. No argument was made by either party that this was incorrect.

[30] The Board was concerned that the Respondent submitted a sur-rebuttal to his own information that was initially used in his evidentiary package in support of the assessment. Although the Respondent rationalized that the sur-rebuttal was a correction to his initial evidence, the Board was concerned as to how this revised information may impact the Complainant. The Respondent also added a column that indicated the assessed cap rates for the two groups of cap rate studies. Although the Complainant raised the matter as a concern, he did not challenge its inclusion, and the hearing was concluded with the sur-rebuttal as part of the evidence. The resulting "assessed cap rates" of the Respondent's group one (properties that were area based) in the sur-rebuttal averaged 7.0% and the median was 7.0% as well. The resulting "assessed cap rates" of the Respondent's group two (properties that were not locational close to the subject) in the sur-rebuttal averaged 7.5% and the median was 7.5% as well. The Board noted that the comparables located close to the subject, were assessed with a 7.0% cap rate while the properties not located in the same area were assessed with a 7.5% cap rate, proving that location is an important factor in the valuation process.

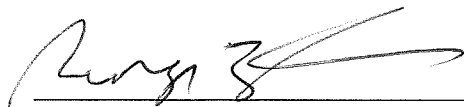

[31] The Board was persuaded that the 2013 assessment of the subject property at \$1,982,000 was fair and equitable.

Dissenting Opinion

[32] There was no dissenting opinion.

Heard November 26, 2013
