

Edmonton Composite Assessment Review Board

Citation: CVG v The City of Edmonton, 2013 ECARB 01508

Assessment Roll Number: 2719367

Municipal Address: 12415 Ston y Plain Road NW

Assessment Year: 2013

Assessment Type: Annual New

Between:

CVG

Complainant

and

The City of Edmonton, Assessment and Taxation Branch

Respondent

DECISION OF
George Zaharia, Presiding Officer
Brian Carbol, Board Member
Brian Frost, Board Member

Procedural Matters

[1] When asked by the Presiding Officer, the parties did not object to the composition of the Board. In addition, the Board Members indicated no bias in the matter before them.

Preliminary Matters

[2] There were no preliminary matters.

Background

[3] The subject property is a two-storey retail building located at 12415 Stony Plain Road NW in the Westmount neighbourhood of west-central Edmonton. The building was built in 1962, is in average condition, and has a gross building area of 17,352 square feet including a basement storage area of 5,260 square feet. The building is situated on a lot 8,039 square feet in size.

[4] The subject property was valued on the income approach using a capitalization rate (cap rate) of 7.5% resulting in a 2013 assessment of \$1,293,000.

Issue

[5] Is the 7.5% cap rate applied to the subject property to calculate the 2013 assessment of the subject property too low?

Legislation

[6] **The *Municipal Government Act*, RSA 2000, c M-26, reads:**

s 1(1)(n) “market value” means the amount that a property, as defined in section 284(1)(r), might be expected to realize if it is sold on the open market by a willing seller to a willing buyer;

s 467(1) An assessment review board may, with respect to any matter referred to in section 460(5), make a change to an assessment roll or tax roll or decide that no change is required.

s 467(3) An assessment review board must not alter any assessment that is fair and equitable, taking into consideration

(a) the valuation and other standards set out in the regulations,

(b) the procedures set out in the regulations, and

(c) the assessments of similar property or businesses in the same municipality.

Position of the Complainant

[7] In support of his position that the 2013 assessment of the subject property is excessive, the Complainant presented a 16-page brief (Exhibit C-1) and a 5-page rebuttal (Exhibit C-2). The Complainant considered the rental rates and allowances used by the City in determining the NOI reasonable, but argued that based on an analysis of the cap rates from the nine sales he put forward, a cap rate of 8.25% would be more appropriate in determining the value of the subject property.

[8] In support of this position, the Complainant provided nine comparable sales of properties similar to the subject. The comparables sold between October, 2009 and June, 2011, ranged in size from 8,830 square feet to 88,820 square feet, and sold for cap rates that ranged from 7.45% to 8.88%. (Exhibit C-1, page 2)

[9] Considering the age, condition, size, and location of the subject property, the Complainant considered sale nos. 3, 7, and 8 as being the best indicators for an appropriate cap rate. Consequently, the Complainant selected a cap rate of 8.25% and when applied to the Respondent’s net operating income (NOI) of \$96,977, the assessment would be reduced to \$1,175,479. (Exhibit C-1, page 2)

[10] In response to a question from the Respondent, the Complainant acknowledged that no adjustments were made to the selling price and NOI of the nine sales comparables to bring the values to the July 1, 2012 valuation date.

[11] The Complainant submitted a rebuttal, taking exception to the cap rates calculated by the Respondent on page 11 of Exhibit R-1. Rather than using the time-adjusted sale price determined by the Respondent and dividing it into the City predicted NOI, he used the 2013 assessments of the four sales to divide into the City predicted NOI, resulting in all the cap rates increasing.

[12] In summation, the Complainant argued that if the NOI and the sale price at the time of the sale are used at some point after the sale, that the relationship is maintained. He also argued that his sales were better, using income at the time of the sale than an investor would know, rather than the hypothetical or "predicted NOI" used by the Respondent.

[13] In conclusion, the Complainant requested that the 2013 assessment of the subject property be reduced from \$1,293,000 to \$1,175,000.

Position of the Respondent

[14] The Respondent stated that the 2013 assessment of the subject was fair and equitable. To support his position, the Respondent presented a 98-page assessment brief (Exhibit R-1) that included law and legislation. He also presented a 6-page sur-rebuttal (Exhibit R-2).

[15] The Respondent provided a "Market/Stabilized Cap Rate Study" based on four sales that occurred between September 20, 2011 and May 15, 2012. The sales resulted in stabilized cap rates that produced an average of 6.87% and a median of 6.89%, suggesting that the 7.5% cap rate applied to the subject property was not too low. In arriving at the predicted cap rate, the Respondent had predicted the NOI of the four properties by using typical rental rates and dividing the resulting NOIs by the time-adjusted sale prices of the four sales. (Exhibit R-1, page 11)

[16] In support of the position that the subject was equitably assessed, the Respondent provided a "Cap Rate Equity Comparables" chart of four properties in close proximity to the subject. Two of the comparables were assessed using a cap rate of 7.0% and the other two were assessed using a cap rate of 7.5% (Exhibit R-1, page 16). In addition, the Respondent provided an assessment map of these four properties, confirming the proximity of the comparables to the subject (Exhibit R-1, page 17).

[17] The Respondent provided a review of the Complainant's nine sales comparables used in his cap rate study. One sale was a multiple parcel sale that included 13 condo units and therefore no revised values were provided by the Respondent. The cap rates as provided by the Complainant were taken from the Network's sale reports that reflected the sales price and NOI at the time of sale. The sales occurred between October 26, 2009 and June 27, 2011 that resulted in an average cap rate of 8.09% and a median cap rate of 8.10%. However, when the sale prices were time-adjusted, and the NOI was calculated using typical values as at the July 1, 2012 valuation date, the average fee simple cap rate was reduced from 8.09% to 6.94% and the median time-adjusted fee simple cap rate was reduced from 8.10% to 6.86%. (Exhibit R-1, page 19)

[18] The Respondent provided a CARB decision (2013 ECARB 00860) dated September 4th, 2013 wherein the Board opined that *"third party publications such as the Network are difficult to evaluate as it is unclear what parameters were used in establishing the cap rates. It is important that the methodology is consistent in the derivation and application of the factors used to calculate the cap rate. For example if the Network uses actual income figures, it should not be used in conjunction with typical data the City is mandated to use in the assessment process."* (Exhibit R-1, page 26, paragraph 45)

[19] The Respondent provided a second CARB decision (2013 ECARB 01272) dated September 10th, 2013 addressing the shortcomings of third party information. The Respondent paraphrased a point made by the CARB that there were *"too many unknown variables"* when using information provided in third party reports. In the decision, the CARB wrote *"The Board*

recognizes that third-party sources are at the mercy of owners as to what information they choose to disclose, or even how the books are kept. As an example, where triple-net leases were implied, the operating expenses per square foot showed an unexpectedly wide variance. In absence of any evidence showing the sources of information input and the methodology used to arrive at the results produced, the Board put less weight on such evidence." (Exhibit R-1, page 71, paragraph 28)

[20] The Respondent provided a sur-rebuttal, making corrections to the "Market/Stabilized Cap Rate Study" that had been presented in Exhibit R-1, page 11, stating that the revised numbers reflect the 2013 assessment values, rather than the originally applied numbers. As a result the average fee simple cap rate changed from 6.87% to 7.09% and the median time-adjusted fee simple cap rate changed from 6.89% to 6.65%. (Exhibit R-2, page 2) In support of this correction, the Respondent provided copies of the City of Edmonton Detail Reports for the four properties.

[21] In summation, the Respondent pointed out that the Complainant did not have any problem with the City's NOI, and questioned why the Complainant had removed two sales with the lowest cap rates from the cap rate study that had been used in hearing a year ago and used again for this hearing. He again referred to the two CARB decisions that questioned the use of third party derived cap rates.

[22] In conclusion, the Respondent requested that the Board confirm the 2013 assessment of the subject property at \$1,293,000.

Decision

[23] The decision of the Board is to confirm the 2013 assessment of the subject property at \$1,293,000.

Reasons for the Decision

[24] The Board placed less weight on the evidence and argument put forward by the Complainant for the following reasons:

- a) The Complainant provided nine sales comparables, and relied upon the cap rates provided by a third party source (The Network) derived from the NOI and sale price at the time of the sale, as much as 2 years and 9 months prior to the July 1, 2012 valuation date.
- b) Based on the information submitted by the Complainant, gleaned from third party sources, it would appear that the cap rate applied to the subject was too low. However, when the Respondent time-adjusted the sale prices to the July 1, 2012 valuation date and revised the NOI based on typical rental rates (that the Respondent is mandated to use by regulation), the cap rates were reduced to below the 7.5% cap rate applied to the subject property, and thereby supported the applied cap rate.
- c) The Complainant challenged the City's predicted cap rates. The Complainant suggested instead that the 2013 assessed values of the comparables should be used rather than the time-adjusted sale price. By dividing the assessed value into the predicted NOI, the resulting average cap rate of 7.36% and median cap rate of 7.75% still provided reasonable support to the 7.5% cap rate applied to the subject property. However, this

method of calculating a cap rate is not consistent with the cap rate derived from the NOI and sale price of a property when a buyer is considering “risk”. In the case of the subject property, its assessed cap rate of 7.5% is well supported by the cap rates (average of 6.87% and median of 6.89%) derived from the parameters that an investor would depend upon in deciding whether or not to invest in a particular property. Therefore, the Board placed little weight on the Complainant’s suggested method of determining a cap rate.

- d) Although this Board is not bound by decisions rendered by other CARBs, this Board agrees with the positions taken by the other two CARBs in the September 2013 decisions. Specifically, this Board agrees with the statement made by the CARB in 2013 ECARB 00860 where the CARB wrote: *“It is important that the methodology is consistent in the derivation and application of the factors used to calculate the cap rate. For example if the Network uses actual income figures, it should not be used in conjunction with typical data the City is mandated to use in the assessment process.”*

[25] The Board placed greater weight on the evidence and argument put forward by the Respondent for the following reasons:

- a) The cap rates derived by the Respondent in his “Market/Stabilized Cap Rate Study” were based upon parameters as of the July 1, 2012 valuation date. The resulting average cap rate of 6.87% and median cap rate of 6.89% suggest that the 7.5% cap rate applied by the City in calculating the 2013 assessment of the subject property was not too low. As much as the Complainant argued that the incomes used by the Respondent in calculating the NOI as of the valuation date were “hypothetical”, he had stated in his evidentiary package that the *“income estimate utilized by the City are considered reasonable”*. As well, typically the Complainant utilizes the time-adjustment factors used by the City in time-adjusting sale prices to the valuation date. Therefore, this Board found no reason to question the validity of the “Predicted City Cap Rates” as calculated in its study.
- b) The Board is satisfied that the subject property was equitably assessed using the 7.5% cap rate, in that this cap rate and a 7.0% cap rate was applied to other similar retail properties in close proximity to the subject.
- c) The Board was persuaded that the Respondent prepared the assessment of the subject property in accordance with s. 2(a) the *Matters Relating to Assessment and Taxation Regulation* that states: *“An assessment of property based on market value must be prepared using mass appraisal”*.

[26] The Board noted that both parties used different types of properties within the retail group such as neighbourhood shopping centres, office buildings, retail/apartment up, and retail plazas to support their respective positions. No argument was made by either party that this was incorrect.

[27] The Board was concerned that the Respondent submitted a sur-rebuttal to his own information that was initially used in his evidentiary package in support of the assessment. Although the Respondent rationalized that the sur-rebuttal was a correction to his initial evidence, the Board was concerned as to how this revised information may impact the Complainant. Although the Complainant raised the matter as a concern, he did not challenge its inclusion, and the hearing was concluded with the sur-rebuttal as part of the evidence. Although the resulting “predicted cap rates” in the sur-rebuttal were both increased and reduced slightly, the Board did not have to rely upon the revised cap rates to arrive at its decision.

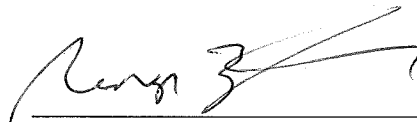

[28] The Board was persuaded that the 2013 assessment of the subject property at \$1,293,000 was fair and equitable.

Dissenting Opinion

[29] There was no dissenting opinion.

Heard November 26, 2013

Dated this 9th day of December, 2013, at the City of Edmonton, Alberta
